

TANK PMD	MOUNT Tabs	LOCATION Girth	PMD DEVICE Simple Vane
The propellant tank is a spherical pressure vessel constructed of f6AL-4V Titanium. Propellant in-flow and out-flow are provided by an internal PMD assembly retained at the outlet region of the tank. Mounting is accomplished by lugs parallel with and adjacent to the mid-plane. Connection is made to the propellant and pressurant compartments through tube stubs with titanium to stainless steel transitions.
